Stage 2 Science

Dear Parents/Carers

In Science this term, students have explored forces and motion.

To reinforce their learning, students will watch the mini-documentary *Caine's Arcade*, the true story of an innovative nine year old who builds his own games arcade from cardboard and other recycled materials.

To help with the culminating activity, please send in items that your child could use to create their own arcade game. Please send in during Week 10 so students can build during Week 11.

This could include cardboard boxes of various sizes, plastic cups, string, tape, cling wrap cardboard rolls etc. (Please note that toilet roll cardboard cannot be used in the design) We encourage you to talk to your child about your favourite arcade games, give ideas, make suggestions and help them to research potential games on the internet. Thank you for your assistance.

Kind Regards,

Stage 2 Teachers
